Region Västra Götaland selects eBuilder's Procurement Cloud Process for its value network

Region Västra Götaland has chosen eBuilder to provide the e-commerce solution to be used when it introduces electronic procurement/purchasing of goods and services, both internal and external. eBuilder won the contract in competition with three other bidders for "IT Service Marketplace Västra Götaland Region". The contract is valued at US$ 14.5 million (SEK 107 million) over a five-year period.

To better track the internal and external procurement/purchasing of the goods and services, Region Västra Götaland will introduce this new model for this type of electronic commerce. The decision was taken on 22 June 2010 and is based on an extensive feasibility study carried out in 2007-2009.

Will Save US$ 47.3 million (SEK 350 million) over five years

Region Västra Götaland buys external goods and services for approximately US$ 9.9 billion (SEK 14 billion) yearly, according to CIO magazine (2009-06-05). With the introduction of eBuilder's highly-automated, centralized, end-to-end solution, Region Västra Götaland expects to save more than US$ 47.3 million (SEK 350 million) over five years.
